

NGUYEN NGOC TUONG VI

FRONT-END ENGINEER

Ho Chi Minh City | 037 953 1098 | nntvi.2609@gmail.com | <https://github.com/nntvi>

ABOUT ME

Front-end developer with 5+ years of experience building production web applications with React. Experienced in developing complex, data-driven interfaces for enterprise products, with a focus on maintainable code, reusable components, and user-friendly experiences.

EXPERIENCE

MealSuite

December 2025 - Present

MealSuite is a North American foodservice technology platform for senior living and healthcare, supporting end-to-end operations across inventory, procurement, budgeting, and dining services.

- Built complex inventory workflows with **React**, **TypeScript**, and **Material UI** in a Vite-based application supporting large data tables, filtering, bulk actions, and role-based behaviors across Inventory On Hand and Worksheet.
- Used **SWR** to manage server state, caching, revalidation, and API-driven UI updates across inventory and financial workflows.
- Developed reusable frontend patterns for Financial Insights, including dashboard sections, date-based filtering, facility-level views, and form workflows with **React Hook Form** and **Zod** for managing financial configuration and validating user inputs.
- Used **Claude Code** and custom **AI-assisted commands** for requirement analysis, codebase exploration, implementation planning, debugging, and code review.
- Worked closely with Product, Design, Backend, and QA teams to refine requirements, collaborate on UI designs in Figma, and deliver production features.

Impact: Helped improve inventory and financial workflows by providing clearer data visibility and more efficient tools for day-to-day foodservice operations.

VietNam Blockchain Corporation

July 2023 - November 2025

BiwaseAI - Internal AI Chat Platform

An internal AI assistant designed to improve communication and knowledge sharing across BIWASE.

- Built real-time AI chat experiences with **Next.js**, **React**, **TypeScript**, and **TanStack Query**, handling streamed responses and asynchronous message updates while keeping the UI responsive.
- Implemented virtual scrolling, message caching, and incremental rendering to keep long chat histories performant and avoid rendering the entire conversation at once.
- Structured reusable chat components and message states to support loading, streaming, retry, and completed-response scenarios without duplicating UI logic.
- Used **Tailwind CSS** and **Shadcn/ui** to build consistent, reusable interface patterns while keeping development speed high.

Impact: Made internal knowledge more accessible through real-time chat assistance, voice input, and multilingual support.

WaterSense – Real-time Water Network Monitoring

WaterSense is a real-time monitoring platform for smart water networks, providing visibility into sensors, devices, and network conditions across multiple locations.

- Built interactive GIS monitoring features with **React**, **TypeScript**, and **Mapbox GL**, enabling users to track smart water devices and inspect network conditions directly on the map.
- Integrated **Socket.IO** for real-time sensor, device status, and alarm updates, allowing the UI to reflect operational changes without requiring full-page or full-dataset refreshes.
- Used **React Query** to manage server state, caching, and asynchronous data fetching across monitoring dashboards and device views.
- Built real-time dashboards with **ApexCharts** to visualize sensor trends and operational metrics for faster issue detection and monitoring.

Impact: Centralized real-time device, sensor, and network monitoring across multiple provinces, improving issue visibility and operational response.

CRM Biwase Binh Duong and Binh Phuoc

A customer and operations management platform built for BIWASE, later expanded from Binh Duong to Binh Phuoc and used across both regions.

- Built complex CRM workflows with **React**, **TypeScript** and **React Query**, supporting customer, service, and operational processes across multiple modules.
- Developed reusable form and table patterns for large business workflows, reducing duplicated UI logic across customer management, reporting, and administration screens.
- Integrated **Socket.IO** for real-time updates and notifications, improving visibility into changes without requiring manual page refreshes.
- Built Excel and PDF export features with ExcelJS and @react-pdf/renderer, allowing users to generate operational reports directly from the system.
- Integrated external business services including call center, e-contract, and billing systems, connecting CRM workflows with existing operational processes.

Impact: Helped centralize customer and operational workflows across multiple regions and connected key business processes within a single platform.

ITBee Solutions

Jan 2021 - May 2023

Worked on multiple web applications across CRM, e-commerce, and real estate, focusing on business management workflows and user-facing features.

- Built business management features with **React** and **TypeScript**, covering customer, product, inventory, order, and role-management workflows.
- Developed reusable UI with **Material UI**, **Ant Design**, and **Tailwind CSS**, and implemented features such as real-time messaging and affiliate commission management.

EDUCATION

Ho Chi Minh University of Nature Resources and Environment

2016 - 2020

Bachelor's Degree in Information Technology

LANGUAGES

English — Fluent verbal communication

Vietnamese — Native
